

Study of Sex Ration in Hissar District in Haryana

Naresh Kumar

Introduction : According to census sex ratio is defined as the ratio of female over per thousand males. It is very vital statistics of any census report, because on this statistics whole of family planning and other applied planning of

any country or state is depended. It is also an important socio-economic bearing. It is also a social indicator of the equity prevailing between males and females at a given points of time. The Sex –Ratio in Hisar district continuous to be of grave concern as it has declined from 871 female per thousand male in 1951 to 853 female per thousand male in 2001.

Hisar district has its population 1129711 when we are bifurcate this figure in males and female then its as follow 520046 women is 609665 men. It simply means there is 853 women behind 1000 men in the district as per 2001. As compare to this sex ratio in 1991 was also 853
