### Abstract

School environment greatly affect the motivation of students in getting knowledge, the article of school environment has a very important role for students in the process and development of learning. So that related to the condition of the school must be considered well by all parties, such as learning facilities and infrastructure, interaction relationships between students and other students, teachers and students, the discipline run in one school and various other school environment conditions that influence on student learning . Because without adequate facilities and infrastructure for students in learning, it will make students decreased their motivation in learning. Similarly, the interaction is built in one school, although the social interaction occurs among students.

**Keywords:** School Environment, Environment Conditions, Learning, Development, Infrastructure etc.

### Introduction

There is an interaction between individual person's behavior and his/her environment according to his/her genetic characteristics. This interaction is one's personality trait which distinguishes one from his/her peers. Similarly, creativity originally stems from genetic factors, but it cannot be successfully achieved and developed save via the creation of the suitable environment socially, educationally and psychologically which will help develop individual creativity positively to serve one's environment and society.

Creativity is a psychological construct which is partly of genetics that determines the growth and partly of environment which opens the human capability and allows it to flourish, therefore, there is a room for the school environment to improve and increase. Individual's environment plays a
